

Withdraw from Trust Wallet

Withdrawing Shiba Inu cryptocurrency from Trust Wallet can be done in a fairly short time period. Here is a guide to do so.

Step 1: Convert to a widely accepted cryptocurrency

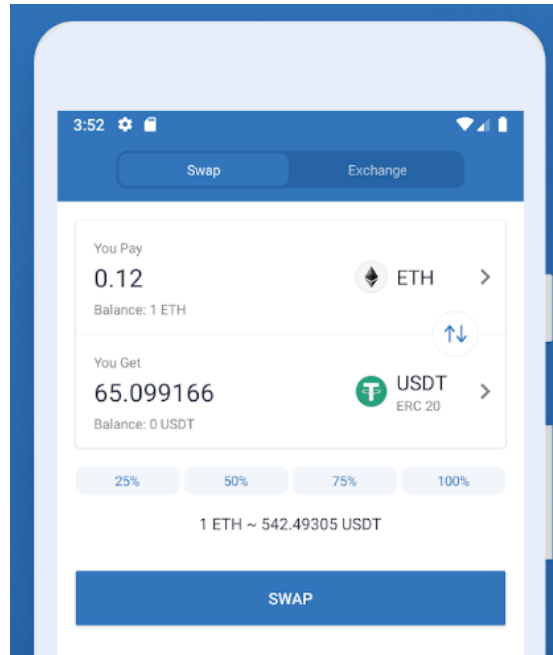

You cannot sell your SHIB tokens directly for US Dollars, but can convert to a more common form of cryptocurrency. Here is how to do so.

1. Open your TrustWallet app (or account on computer) at trustwallet.com.

2. Go to the wallet page (where your cryptocurrency is stored)
3. Tap on the “Swap” button at the top of the page.
4. Select your SHIB tokens under the “You Pay” category, and your most trusted cryptocurrency under the “You Get” category. Examples of this cryptocurrency could be USDC (USD Coin), USDT (Tether Coin), BTC (Bitcoin), ETH (Ethereum), or another currency you’d like.

See the image on the next page for what this should look like on your phone.

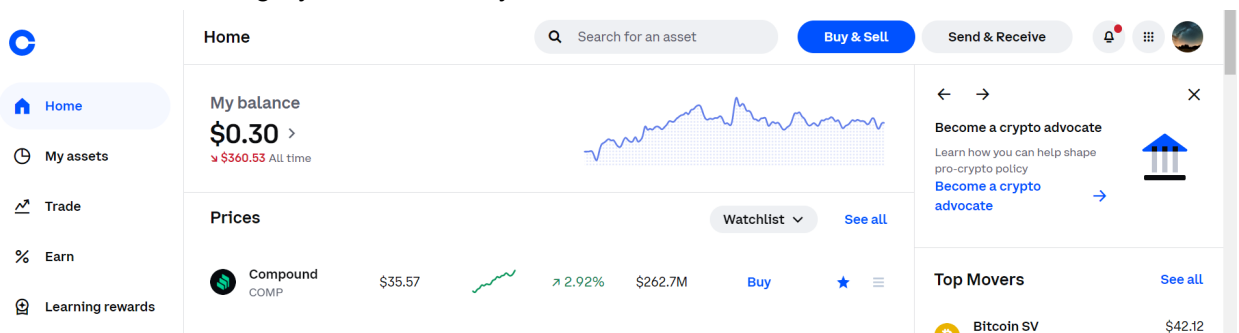

5. Wait for the transaction to process. Once this is complete, you will see your new currency in your wallet. This is what you will be able to sell on a centralized exchange for dollars.

Step 2: Transfer to a centralized exchange that supports withdrawal

Next, you will transfer your newly converted cryptocurrency to an exchange where you can cash it out. Some popular exchanges that you might have an account with include Coinbase, Binance, Gemini, and others.

If you don't have an account yet, I'd recommend setting one up with Coinbase at [this link here](#). Otherwise, log into your account and prepare to transfer.

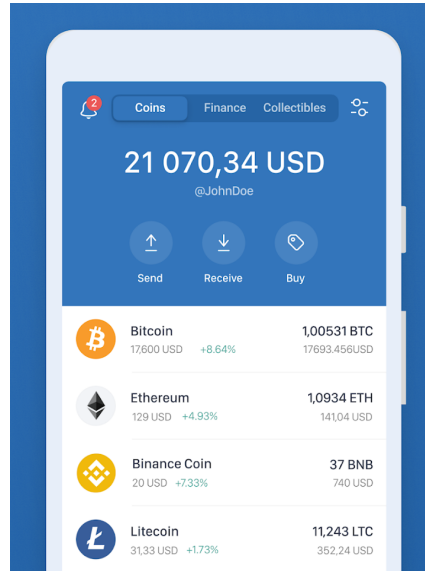

1. Log into your exchange and navigate to a page that says "Deposit". On Coinbase's website, click on the gray button that says "Send & Receive"

2. On your exchange's page, you'll be given a deposit address. Copy this address to your clipboard. Make sure that it is for the cryptocurrency you just converted to in your Trust

Wallet (e.g., if you just swapped for ETH, make sure you are depositing at an ETH address)

3. Go back to your Trust Wallet on the “Wallet” page, and click the button at the top that says “Send”

4. Paste the deposit address (or type it in manually if you're on two different devices) that the exchange provided you with and confirm the transaction.
5. Make sure that the transaction clears; this can take some time. The cryptocurrency you transfer should appear eventually in your centralized exchange account.

Step 3: Sell your cryptocurrency for cash

This step should be fairly straightforward, as most exchanges have a good interface and design for selling your tokens.

1. On your centralized exchange, find the trading pair for your cryptocurrency and desired fiat. Make sure that the second currency in the pair is actually the fiat currency, not another stablecoin. On Coinbase, this can be done under the blue “Buy & Sell” button.

2. Swap the cryptocurrency for US Dollars. Make sure to enter the amount that you want to sell, not just the total amount of cryptocurrency you have in that token.

Step 4: Withdraw cash from your account

The last step: money in your bank account

1. Navigate to the withdrawal page on your centralized exchange. For Coinbase, this is again under the gray "Send & Receive" button (this time sending, not receiving).
2. Choose the amount of dollars to withdraw and the bank account you wish to deposit money in. You should have linked a bank account to your exchange's account as a part of signing up; however, if you haven't, make sure to do this before attempting to withdraw cash.
3. Add bank account details and confirm the transaction.

If adding a bank account, this may take more time due to KYC (know your customer) laws that US regulators require exchanges to comply with.

Hope that this is helpful! Let me know how it goes and if you're able to get your money!
